

THE CHALLENGE

The Lilliputians, a race of tiny people first discovered by that intrepid traveler Gulliver, guard BWI airport from the dreaded Gremlins, a mischievous sort of tiny creature who delight in jinxing pilot, plane, and traveler alike (see the Bugs Bunny classic, "Falling Hare").

The dreaded Gremlin.

The Lilliputians are looking for a reliable paper airplane that their human handlers can use to send them where needed to defend the airport. The Lilliputians are looking for a design that can be manufactured quickly but reliably by assembly line techniques. The planes must be easy enough to be thrown far, fast, and accurately by elementary school students. Paper clips will serve as surrogate Lilliputians for testing purposes.

ENGINEERING TEAM REQUIREMENT

Each team should consist of at least four students. Only 4 pre-chosen students may construct and throw planes at the competition. Teams may share students at the same grade level or use younger grade students if needed to have at least 4 students on a team. There is no limit to the number of teams a school may have.

DESIGN AND CONSTRUCTION STANDARDS

At the competition, each team must use the piece of 8.5" x 11" paper (*20-pound or 75 grams/meter²*) and jumbo paper clip (*Acco Premium Silverette Jumbo Paper Clips #72503, or equivalent*) provided by the sponsors.

- Only one piece of paper and one paper clip allowed per plane (unlimited number of scraps).
- No tools or construction materials other than the paper and paper clip provided.
- Three minutes will be given for four students to construct four identical paper airplanes by assembly line method.
- All four students must be involved in the manufacturing process.
- No coaching or other adult help fabricating the paper airplane will be allowed during the performance competition.
- Paper clip must remain attached to or inside the airplane for flight to count. One re-throw allowed for lost passenger.

PERFORMANCE DEMONSTRATION GUIDELINES

Each of the four students must fly a plane. Individual score is Length x Speed x Accuracy. Team score is sum of individual scores.

- Length = Length of Flight
- Speed = Length of Flight / Time of Flight
- Accuracy = 1 - Distance from Reference Line / Length of Flight

Paper clip must remain attached to or inside the airplane for flight to count. One re-throw allowed for lost passenger.

EVALUATION STANDARDS

This elementary school-level competition involves four main components: the design and construction of the project, a written report, an oral report, and the performance demonstration.

- | | |
|---|------------------------------|
| 1. Design & Construction | Competition value: 20 points |
| 2. Written Report | Competition value: 30 points |
| <i>Each TEAM should complete the "Student Design Report" at the end of this document.</i> | |
| 3. Oral Interview | Competition value: 20 points |
| 4. Performance Demonstration | Competition value: 30 points |

An outline of what is required for each of these components, and general guidance on preparing for the competition, is given in the "Elementary School Guide to Entry" which should be read in connection with this document.

GOOD LUCK TO YOUR TEAM!

STUDENT DESIGN REPORT

Team Name

We are (please check one):

Grade One: ___ Grade Two: ___ Grade Three: ___ Grade Four: ___ Grade Five: ___

Team Members

Team's School Name (if applicable) and County

Adult Coach

Coach's Email

DESIGN REPORT DIRECTIONS

Make a copy of the "Student Design Report" pages for each TEAM. Team members should complete each part by clearly printing the requested information. Additional pages may be inserted as needed. The information in this booklet must be the work of student team members, as certified on the final page.

**Written reports must be submitted, either by mail or in person, to:
BMI, 1415 Key Highway, Baltimore MD 21230, prior to 4:00 p.m. on February 3, 2017**

Explain why you chose your first design for an airplane. *Include a sample of this design.*

What problems did you encounter with your first design?

Explain the improvements or changes made to your design after testing. *Include samples of improved designs,* and explain how they were better

Explain which design is the best.

How successful is your best plane?

What math skills were needed in this challenge?

What science skills were needed in this challenge?

List the safety rules you followed to make sure no one got hurt:

What did you learn by taking part in this project?

What did you enjoy most about taking part in this project?

List dates of important milestones in your project and describe those milestones:

Resources: List all the information resources used to solve the challenge problem. Include books, pictures, and websites.

List the materials used in constructing your project:

Materials

Cost

Tools Used

Explain what help adults gave your team:

Name

Type of Assistance

Team Members: List the team members, with a short description of how each person helped to make the project a success. What special skills were learned or demonstrated by each person?
